Soil organic carbon content is the foundation of soil fertility and sustainable crop production. It improves soil structure, increases nutrient availability, increases water holding capacity and supports the growth of beneficial soil microorganisms. But due to intensive farming, excessive chemical use and poor organic matter management, almost all agricultural soils are suffering from organic carbon deficiency, resulting in day-to-day decline in soil fertility, microbial activity and crop productivity.

Multiplex Annapurna Active is a unique bio-enriched organic manure fortified with Biochar, a stable and porous carbon material that helps restore soil organic carbon content, thereby helping farmers achieve higher crop productivity with improved quality of produce.

DIRECTION FOR USE

Field Crops and Vegetable Crops: Apply Multiplex Annapurna Active 60 kg per acre during land preparation or sowing.

Plantation Crops: Apply Multiplex Annapurna Active 250 grams per plant twice a year

BENEFITS OF MULTIPLEX ANNAPURNA ACTIVE

- Improves Soil Organic Carbon content, thereby increasing long-term soil fertility and soil productivity
- Increases better root proliferation and enhances nutrient uptake from the soil
- Reduces soil compaction and improves soil aggregation
- Helps crops to tolerate drought stress and improves water use efficiency
- Improves crop yield both by quality and quantity

Available Packing: 20 kg

Manufactured by

MULTIPLEX BIO-TECH PVT. LTD.

No. 180, 1st Main Road, Mahalakshmi Layout Extension, Bengaluru - 560 086. INDIA.
