Dab Plus

100% WATER SOLUBLE MIXTURE OF FERTILIZER

Plant growth and development largely depend on the combination and concentration of essential major secondary and micronutrients available in the soil. Plants often face significant challenges in obtaining an adequate supply of these nutrients to meet the demands of basic cellular processes due to their relative immobility. However, phosphorus is one such essential nutrient where uptake is highly challenging as phosphorus is more reactive and immobile in soil. Understanding plant growth and development are intricately linked to the availability and balance of nutrients in the soil. Multiplex has come up with breakthrough innovation technology and developed Multiplex Dab Plus, a hundred percent water-soluble mixture of fertilizer with essential major nutrients and micronutrient, where available Nitrogen (18%) and Phosphorus (46%) which are in readily absorbable form and helps in faster assimilation, increasing the efficiency of phosphorus and nitrogen in plants. Micronutrient in Multiplex Dab plus activates the plant metabolism, promotes early root growth, stimulates tillering, helps profuse branching, regulates flowering and fruit setting, seed formation and enhances water use efficiency in plants improving the yield both by quality and quantity.

DIRECTION FOR USE

Foliar Spray: Dissolve 5 g of Multiplex Dab Plus in one litre of water and spray on both surface of the leaves. We recommend two sprays, first spray 15 days after sowing/ transplanting and the second spray 15 days after the first spray.

Fertigation: Dissolve Multiplex Dab Plus 2 to 3 kg in 200 litres of water and fertigate for one acre.

Note: Mix Multiplex Maxiwet 1 ml per liter or Multiplex Nagastha 0.5 ml per litre of prepared spray solution.

Packing: Multiplex DAB Plus is available 1 kg packing.

BENEFITS OF MULTIPLEX DAB PLUS

- Uniquely formulated and is completely water soluble and thus readily absorbed by the plants
- Supplements essential major nutrients and micronutrients
- Increases root mass, root proliferation and better anchoring
- Increases the number of branches, new leaves and enhances the photosynthesis rate
- Promotes flower initiation, fruit formation and grain maturity
- Improves yield both by quality and Quantity
