DAP Plus

100% WATER SOLUBLE MIXTURE OF FERTILIZER

Plant growth and development largely depend on the combination and concentration of essential macronutrients and micronutrients available in the soil. However, plants often face significant challenges in obtaining an adequate supply of these nutrients due to their relative immobility. Phosphorus, in particular, is an essential nutrient that is found to be difficult for plant uptake because it is highly reactive and immobile in soil. Understanding plant growth and development is complexly linked to the availability and balance of mineral nutrients in the soil. To address these challenges, Multiplex has introduced an innovative technology product named Multiplex DAP Plus (18-46-0) with 100% water-soluble mixture fertilizer that contains essential macronutrients and micronutrient. This product provides readily absorbable phosphorus and nitrogen, which enhances faster assimilation in plants, increasing the nutrient use efficiency.

The micronutrient in Multiplex DAP Plus activates plant metabolism, promotes early root growth, promotes profuse branching and increases the number of tillers. It also regulates flowering, boosts fruit set and seed formation and improves water use efficiency, resulting in greater yields in both quality and quantity.

DIRECTION FOR USE

Foliar Spray: Dissolve 5 g of Multiplex DAP Plus in one liter of water and spray on both surfaces of the leaves. We recommend two sprays. First spray 15 days after sowing/transplanting and the Second spray 15 days after the first spray.

Fertigation: Dissolve Multiplex DAP Plus 2 to 3 kg in 200 Liters of water and fertigate for one acre.

Note: Mix Maxiwet 1 ml per liter or Multiplex Nagastha 0.5 ml per Liter of prepared Multiplex DAP plus spray solution.

Packing: Multiplex DAP Plus is available 1 kg packing.

BENEFITS OF MULTIPLEX DAP PLUS

- Uniquely formulated which is completely water soluble and readily absorbed by the plants
- Supplements essential major nutrients and micronutrients
- Increases root mass, root proliferation and better anchoring
- Increases the number of branches and new leaves and enhances photosynthesis
- Promotes flower initiation, fruit formation and grain maturity
- Improves yield both by quality and Quantity
