MULTIPLEX SUPERWET

मल्टीप्लेक्स सुपरवेट

ADVANCED SILICON SUPER SPREADER

In agricultural sprays, a considerable amount of pesticides, fungicides, herbicides, and foliar nutrients is lost due to poor droplet spread, runoff, evaporation, and limited penetration on waxy or water-repellent leaf surfaces. This leads to uneven coverage, reduced product performance, repeated applications, and higher input costs.

MULTIPLEX SUPERWET is an advanced Non Ionic organo-silicone wetting and spreading agent that significantly lowers the surface tension of spray solutions, ensuring rapid spread, uniform coverage, better retention and improved penetration of foliar sprayed agrochemicals and nutrients. It reduces wastage and improves spray efficiency. Multiplex Superwet enhances the effectiveness of crop protection chemicals and nutrient products, promoting healthier crops, improved productivity and better return on investment.

DIRECTION FOR USE

Mix 0.3 ml to 0.4 ml of Multiplex Superwet in one liter of prepared spray solution and spray on both the surfaces of the leaves.

BENEFITS OF MULTIPLEX SUPERWET

- Enhances spreading and uniform coverage of sprayed droplets on leaf surfaces
- Improves penetration and absorption of sprayed agrochemicals into plant tissues
- Increases the efficacy of pesticides, fungicides, herbicides, and foliar nutrients
- Restrict runoff and retention of sprayed agro inputs on crop foliage
- Reduces spray solution surface tension thereby minimizing droplet runoff and wastage
- Supports better crop protection and nutrient utilization, leading to improved plant health and productivity

Available Packing: 1 litre, 500 ml, 250 ml, 100 ml & 50 ml

Manufactured by

KARNATAKA AGRO CHEMICALS

No. 180, 1st Main Road, Mahalakshmi Layout Extension, Bengaluru - 560 086. INDIA.
